

Connecting To WiFi On Your Personal Windows 10 Device

THE NEW NETWORK IS CALLED **byodscdsb**

After completing these steps and successfully connect to this WiFi network, you shouldn't have to reconnect every day; your device will automatically connect to WiFi.

byodscdsb

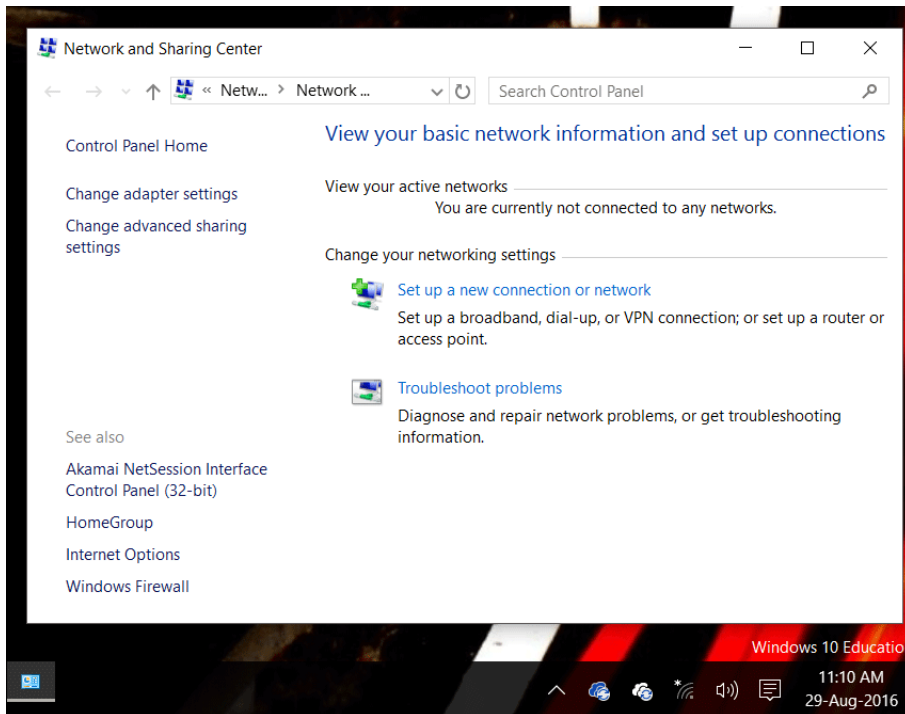

ON YOUR WINDOWS 10 DEVICE:

Right-click on the network icon  on the system tray (bottom right, where the clock is).

Select **Open Network and Sharing Center**.

Select **Set up a new connection or network**.

Select **Manually connect to a wireless network**.

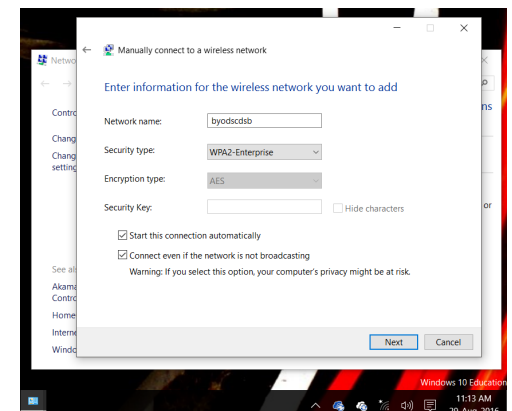

Network name:
byodscdsb

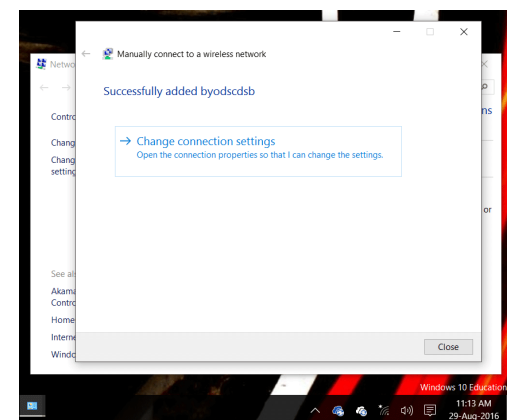

Security Type:
WPA2-Enterprise

Check the box to
Start connection automatically, as well as the Connect even if it is not broadcasting.

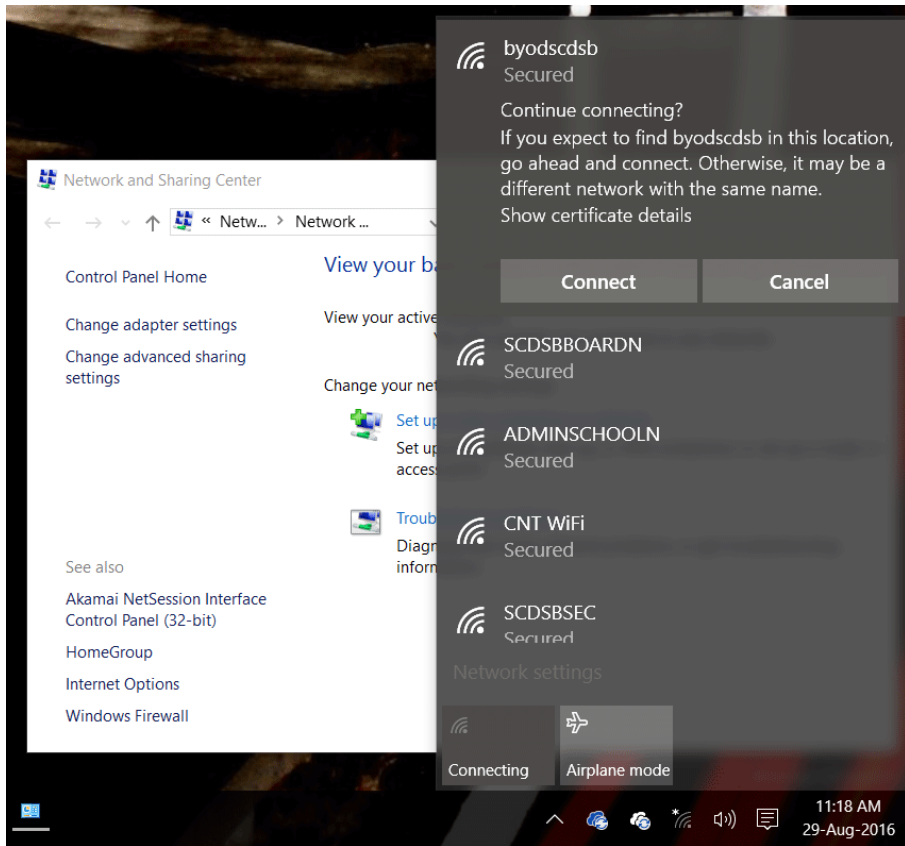

Click **Next**.

Click **Close**

Choose **Connect** if you receive the **Continue Connecting** message, as shown.

When prompted, type in your **SCDSB email address and password**; then click OK.

It may take a minute or two to authenticate; once it does, you will be connected.

IMPORTANT: AFTER ADDING THE **byodscdsb** NETWORK TO YOUR LIST, YOU SHOULD “FORGET” THE **scdsbgw** NETWORK; TO AVOID CONNECTING TO IT IN THE FUTURE.

To forget a WiFi network, click the WiFi button on the bottom right of your screen, select **Network Settings**.

Now choose **Manage known networks**.

Manage known networks

In the Wi-Fi settings screen, select **scdsbgw**, then click **Forget**.
